Foreword

Acknowledgements

Preface

1. An Introduction to Simulation for Learning

- 1.1 The Simulation Paradox
- 1.2 The Epistemic Status of Simulation
- 1.3 Not All Simulations are Created Equal
- 1.4 Differences between Simulation and Games
- 1.5 What is Simulation?
- 1.6 The Need for a Multidisciplinary Approach

2 Simulation and Cognition

- 2.1 Mental Models
- 2.2 Mental Models as Simulations
- 2.3 Simulating Other Minds
- 2.4 Grounding Cognition in Simulation
- 2.5 Simulation and Metaphor

3 Models Everywhere

- 3.1 A Concept at the Crossroads of Different Disciplines
- 3.1 From Logic to Representation
- 3.2 Models and Problem Solving
- 3.3 Types of Models
- 3.4 The Pragmatic Perspective
- 3.5 The Cybernetic Perspective
- 3.6 A General Theory of Models

4 Simulation Modeling

- 4.1 From Models to Simulation
- 4.2 Computational Models
- 4.3 The Modeling and Simulation Process
- 4.4 Modeling and Simulation Paradigms
- 4.5 Dynamical Systems Modeling
- 4.6 From Mechanics to Everything Else
- 4.7 Continuum Physics Modeling
- 4.8 Molecular Dynamics
- 4.9 Compartmental Models
- 4.10 Agent-Based Modeling
- 4.11 System Dynamics
- 4.12 Cellular Modeling and Simulation

- 4.13 Comparing Paradigms
- 5 Simulation-Based Learning**
- 5.1 Simulation-building vs. Simulation-using
- 5.2 The Cognitive Processes Involved in Simulation-Based Learning
- 5.3 Simulative Reasoning in Science
- 5.4 Model-Based Learning and Teaching
- 5.5 Learning by System Modeling
- 5.6 A Cognitive Load Perspective
- 5.7 Choosing the Right Mix
- 6 Simulations for Thinking**
- 6.1 Cognitive Partnering
- 6.2 Thinking (and Computing) Analogically
- 6.3 Simulation and Language
- 7 Simulation-Based Instruction**
- 7.1 Content and Process
- 7.2 Crosscutting Concepts
- 7.3 A Grounded Cognition Perspective on Simulation
- 7.4 The Epistemic Cycle
- Appendix. Simulation Resources.**
- References**
